(page 5) for orders placed before March 1.

Grow Your Own Flowers From Seed

Flowers raised from seed are divided roughly into two classes. (1) Annuals which bloom the same year seeds are planted and are killed by frost in the fall; (2) Perennials which for the most part do not bloom until the year after sowing, but then live on year after year. There are also the biennials which bloom the second year and then die but which can generally be depended on to seed themselves.

The ideal flower garden combines both Perennials and Annuals. The Annuals providing flowers all summer long and the Perennials offering exciting changes as each one comes into bloom during spring, summer and fall. A comparison of the merits of Annuals and Perennials is given below.

ANNUALS

- (1) Bloom in 6 to 10 weeks from sowing
- (2) Annuals must be planted yearly.
- (3) Provide flowers in bloom for 5 months.
- (4) Most annuals bloom for 6 or 8 weeks.
- (5) Best display given from July until frost.
- (6) Annual seeds are inexpensive but must be planted yearly.
- (7) Annuals are free-blooming and if picked will send out a new crop.
- (8) Many annuals are quite fragrant.
- (9) Range of colors in annuals is very wide, even in the same species.
- (10) Annuals are supreme for quick effect.

PERENNIALS

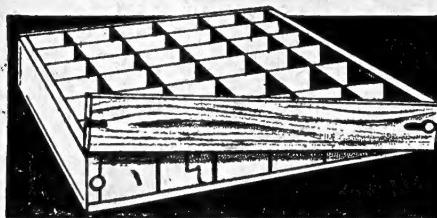

- (1) Bloom year after sowing.
- (2) Perennials come up year after year.
- (3) Provide flowers in bloom 9 months of the year.
- (4) Most perennials bloom for only 2 or 3 weeks.
- (5) Make their best show in May and June with another display in the fall.
- (6) Perennial seeds cost more but need only be bought once.
- (7) Perennials with few exceptions yield but one yearly crop of bloom.
- (8) Most perennials lack fragrance.
- (9) Most perennials are limited in color range in the same species.
- (10) Perennials are permanent by nature and with care will last for years.

Cultural Directions

Sowing flower seeds: There is little difference between sowing annual or perennial seeds. One cardinal rule to follow is not to cover the seed too deeply. Very fine seeds should be sown on top of fine soil and not covered at all. Even the largest flower seed should not be covered more than $\frac{1}{4}$ inch.

For early bloom, start indoors in February, March or April in shallow pots or seed flats. To prevent "damping off" treat seed with one of the seed disinfectants (Spergon 25c or Semesan 60c), water sparingly in dull weather and keep temperature between 65 degrees to 70 degrees. Transplant seedlings to pots or into flats 2 inches apart as soon as large enough to handle. Transplant outdoors as soon as danger from frost is past.

Most flower seeds may be planted outdoors with safety as soon as the ground can be prepared (this is generally from April 15th on). Many varieties will give a fine display planted as late as June 15th.

Garden Flat

GARDEN FLATS

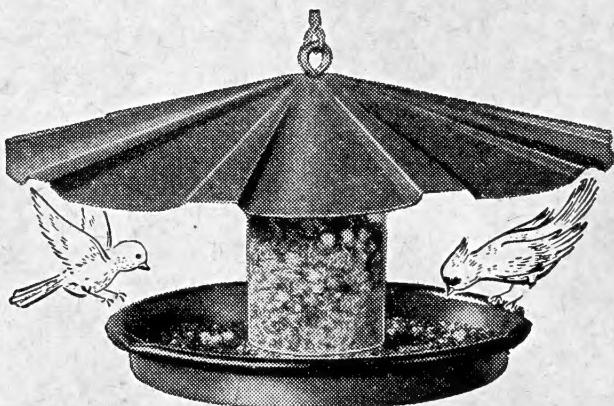

Removable front to permit sliding out pots without root disturbance.

No. 1 Garden Flat with 36 two-inch pots \$1.00 each, postage 20¢; 6 for \$5.75, postage, 60¢.

No. 3 Garden Flat with 16 three-inch pots \$1.00 each, postage 20¢; 6 for \$5.75, postage, 60¢.

Kraft Board Pots sold separately if desired. 2 inch, 100 for \$1.00; 1000 for \$9.00 prepaid. 3 inch, 100 for \$1.35; 1000 for \$12.50, prepaid.

Hyponex. Perfectly safe and entirely free from odor. Use 1 teaspoonful to a gallon of water to make a complete liquid plant food. 7 ozs. 50¢; 1 lb. \$1.00, postpaid. 10 lbs. \$8.00; 25 lbs. \$15.00, by express.

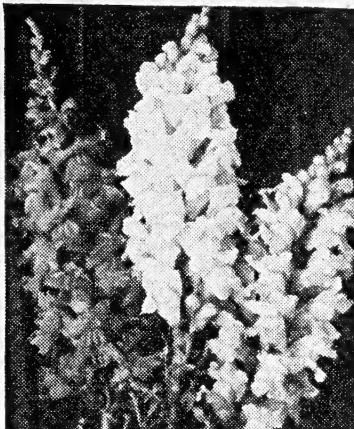

"Country Life" Wild Bird Feeder. Birds will flock to this scientifically designed hanging feeder. Aluminum pan with plastic rim for safe perching. Sloping fluted canopy roof protects bird and feed from bad weather. Finished in Woodland Green baked enamel. 14" x 9". \$4.95, postpaid.

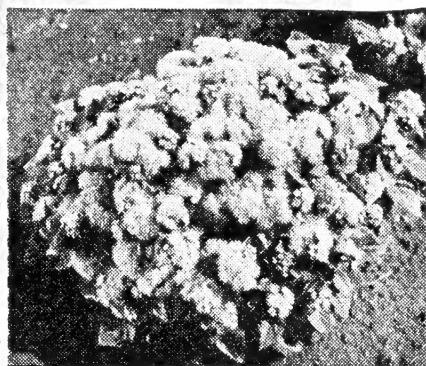

Wild Bird Banquet. (Wild Bird Feed). Everything except Suet and Nuts. Small grains, for small birds—cracked corn for larger birds—a generous helping of Sunflower for Cardinals, Jays and Titmouse. Lb. 35¢; 5 lbs. \$1.25; 10 lbs. \$2.00, postpaid.

DREER'S Annual Flower Seeds

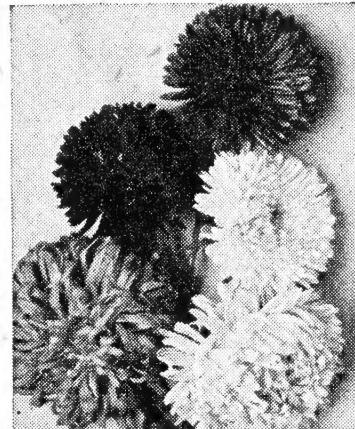

All Pkts. 15¢ each; Any 10 for \$1.25; Any 20 for \$2.00, Except as Noted.

Antirrhinum Maximum

Ageratum Midget Blue

Aster Types

ABUTILON Hybrids, 1009. Mixed colors, summer, 18 in.

ADULUMIA Cirrhosa, 1035. Lavender climber, late summer, 10 ft.

ACROCLINIUM, Double Mixed, 1030. Pink and white, everlasting, 15 in.

AGERATUM

Compact annual plants with tuft-like blooms. Start seed indoors in March, out doors in April-May.

Blue Ball, 1045. Deep Ageratum blue, 6 in.

Blue Cap, 1047. Rich deep blue, 5 in.

Blue Perfection, 1049. Amethyst, fine for cutting, 10 in.

Blue Boy, 1046. Blue, perfect ball-shaped, 4 in.

Fairy Pink, 1052. Bright rose pink, 5 in.

Lasseaux, 1056. Clear pink, for cutting, 10 in.

Midget Blue, 1058. Brilliant blue, midget plants, 4 in.

Improved Dwarf White, 1053. Pure white, compact, 6 in.

Golden Ageratum, 1054. (*Lonas inodora*) yellow, 20 in.

ALYSSUM

Dwarf compact plants literally covered with blooms. Sow seed out doors where plants are to bloom as soon as ground can be prepared. 1/2 oz. 75¢.

Carpet of Snow, 1071. Dwarf, flat, white, 4 in.

"Your Lawn"—from Clay to Turf

The Foundation for a "Good Lawn" is as important as the foundation for a House. There should be six to eight inches of top soil or at least soil with sufficient humus (decayed vegetable matter) to permit the ready flow of moisture down when it rains, up when it is dry.

HEAVY CLAY SOIL can be broken up and made more porous by mixing in:

Michigan Peat. Natural 97 per cent organic Peat that holds moisture, increases bacteria action and has some fertilizer value. On good soil, use 1½ bushels per 100 sq. ft.; on poor soil, 3 bushels per 100 sq. ft.; 3 bushel bags \$3.89; 10 bags or more, \$3.50 per bag. F.O.B. Phila., Pa.

FERTILIZERS. You can take your pick but apply sufficient to keep the grass growing through the summer. We like the organics such as:

Bovung. Cow manure with pulverized peanut hulls. 75 per cent organic. 10 lbs. per 100 sq. ft. 50 lbs. \$2.50; 500 lbs. \$23.75. F.O.B. Phila., Pa.

Bone Meal. Raw, not steamed. 5 lbs. per 100 sq. ft. 50 lbs. \$3.25; 100 lbs. \$6.00; 500 lbs. \$25.00 F.O.B. Phila., Pa.

Or the chemical or inorganic fertilizers will give excellent results without quite so much bulk.

Vigoro (5-10-5). Use 2 to 4 lbs. per 100 sq. ft. 25 lbs. \$1.60; 100 lbs. \$4.25. F.O.B. Phila., Pa.

PREPARATION. Spade the ground to a depth of 6 or 8 inches. Rake roughly with a steel garden rake to remove coarse rubble. Permit the ground to settle for 10 days and apply the fertilizer as above and rake again.

SEEDING. Sow plenty of seed, 1 pound to 200 sq. ft. Divide the seed in half and go over the plot twice, making the second sowing at right angles to the first.

COVERING THE SEED. Lawn Seeds are quite fine and should be barely covered. Use a light roller or a flexible spring tooth rake.

WATERING. Water only when absolutely necessary and when you water, do a thorough job. Get the water down 4 to 5 inches.

MOWING. Mow as soon as grass is 3 inches high. Mower may be set to cut 1½ inches in May and early June but for summer set to cut not less than 2 inches. Mow often enough so you do not have to use a grass catcher.

ROLLING. Established lawns should be rolled with a medium weight roller, as soon as the ground is dry enough not to pack, to push the roots that have been heaved by freezing and thawing back into the soil.

FEEDING. Grass grows during ten months of the year. Be sure to have sufficient plant food in the ground to nourish it. The new "Lawn Bilder" Lawn food (10 lbs. 1000 sq. ft.) is a combination of all that is best in lawn fertilizers and also contains 2,4-D Weed Killer to help control the weeds. 10 lbs. \$1.29 (Postpaid \$1.60); 25 lbs. \$2.75 (postpaid \$3.45).

RESEEDING. Reseed established lawns in spring and fall, using one pound to 400 sq. ft. For summer baldness, use quick growing Dreer's Summer Patching Mixture, \$1.00 per pound, for temporary relief.

BANKS AND TERRACES require special care and special grasses. See TERRACE LAWN MIXTURE.

The Newest Development in Horticulture

DREER'S Pelletized Seeds

Filcoat Process

Pelletized

Lettuce Seed

Plain

Pelletized Seeds were developed:

- (1) To save labor and expense on the farm and back-breaking thinning out and transplanting in the home garden. They can be planted individually right where you want the seed to grow.
- (2) To produce sturdier growth and higher germination through protection against soil borne disease and weather conditions. Pelletized Seeds may be planted earlier.

Pelletized Seeds have thousands of enthusiastic users one writes:

My Tomatoes from Pelletized Seed not only ripened earlier, but yielded more fruit than those grown by our professional gardener. C. E. J., Faulke and Long Institute.

Important—Planting Directions

Pelletized Seeds are fresh, new, carefully selected seeds coated with a special material to increase the size, protect the seed and stimulate early growth. For best results follow these planting directions carefully.

- (1) Do not cover as deeply as ordinary seeds. Cover only enough to hold the Pellets in place.
- (2) Pelletized Seeds for plants that require spacing of six inches or more apart, should be planted

two at a time and later thinned to the stronger plant. For spacing less than 6 inches apart, plant one Pellet at a time.

- (3) Do no pack or firm soil after planting. Pellets expand when in contact with moisture and packing prevents full expansion which delays germination.
- (4) Pelletized Seeds, being protected, may be planted outdoors in the open ground earlier than ordinary seeds.

Pelletized Flower Seeds

Pkt. 20¢ each; 12 for \$2.00.

ASTER, Late Branching Mixed. P 1330.
BACHELOR BUTTONS, Mixed. P 1880.
CALENDULA, Double Mixed. P 1600.
CARDINAL, Climber. P 1757.
COSMOS, Radiance. P 2059.
